Project : ALCASAR	Author : Rexy with support of "Alcasar team". Thanks to translators.
Object : Installation	Version : 3.1.2
Keywords : Network Access Control (NAC), accountability, traceability, authentication, captive portal, parental control	Date : 2017, June

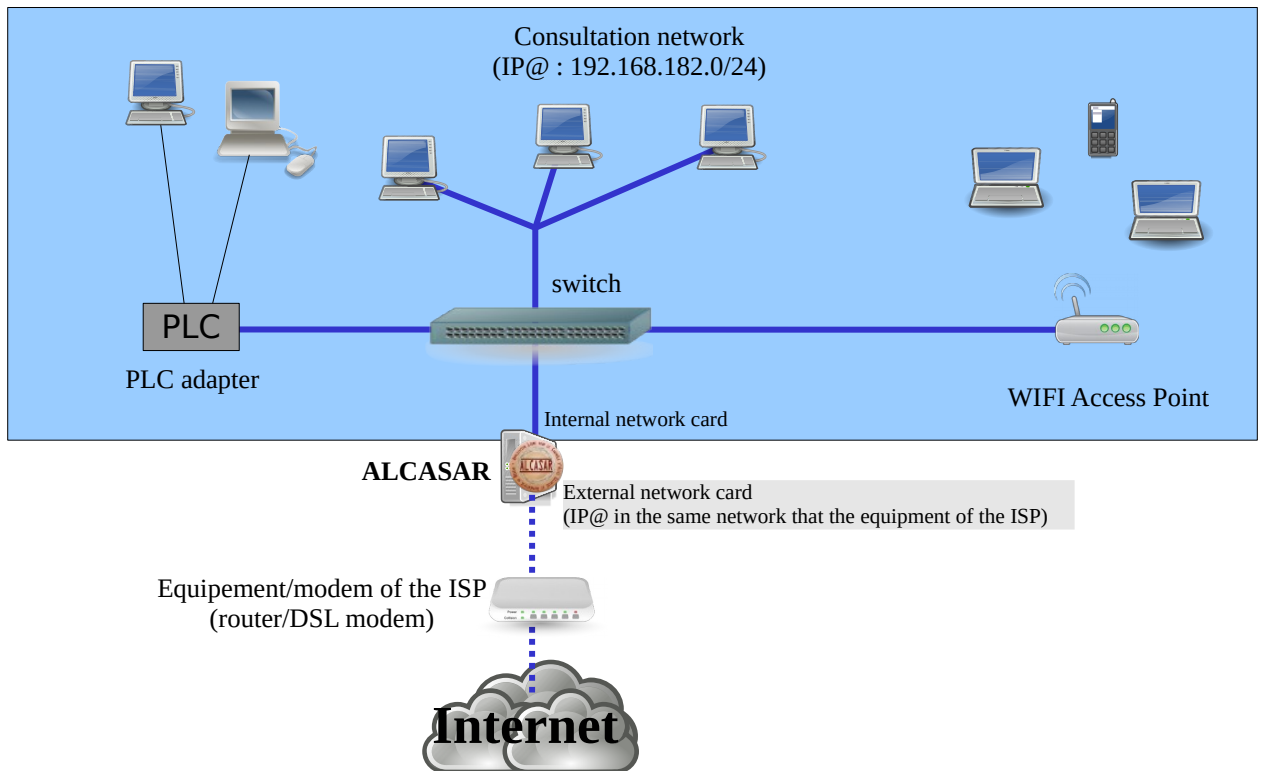

1. Introduction

This document describes the installation procedure of the ALCASAR portal. It is supplemented with three other documents : the presentation document, the operating instructions document and the technical document.

If you already have a working version of ALCASAR and you want to upgrade it, please refer to the operating instructions document (chapter « update »).

ALCASAR can be installed on a standard computer with two Ethernet network cards. The first one (eth0) is connected to the Internet Service Provider's equipment. The second one (eth1) is connected to the switch used to service the network consultation computers.

By default, the IP address of this second network card is : 192.168.182.1/24. This allows to have a class C network (254 equipment). This network addressing plan can be modified during the installation stage. For all equipment of consultation network, ALCASAR is the DHCP server, the DNS server, the network time server and the default router (gateway). **Thus, on this network, there must be no other DHCP server and gateway** (check your Wi-Fi access points).

Examples of IP addressing plans

Parameters	@IP of the network	Number of equipment	Network mask	@IP of ALCASAR (this address is the IP address of the DNS server and of the default gateway)	DNS suffix
Classe					
Default IP address plan (C class)	192.168.182.0/24	253	255.255.255.0	192.168.182.1/24	localdomain
B class IP plan	172.16.x.0/16 $1 \leq x \leq 255$	65533	255.255.0.0	172.16.x.1/16	localdomain

Even if it is possible to define a class A network, you shouldn't do it because the embedded DHCP server will have to manage over than 16 million IP addresses. The management of such volume of addresses would spend too much memory.

2. Installation

The installation of the portal consists of two steps. The first one is the installation of a minimalist Linux operating system based on Mageia 5.0. The second step installs and configures all the components of ALCASAR.

2.1. Hardware requirement

ALCASAR only requires one standard desktop computer with two network cards and a hard drive with a capacity of at least 100 Go in order to be able to store logs related to connections tracing. Only 64b architectures are supported. ALCASAR includes several optional filtering systems (network protocols, URL, IP addresses, domain names and antimalware). If you decide to enable these filtering systems, it is recommended to install at least 8 GB of RAM in order to ensure an acceptable processing speed (ALCASAR loves the RAM ;-)

 In case of using a Virtual Machine (VM) : be sure that the size of the hard drive **isn't smaller than 30G.**

2.2. Installation of the system

The installation procedure of the operating system is the following (estimated time : 6') :

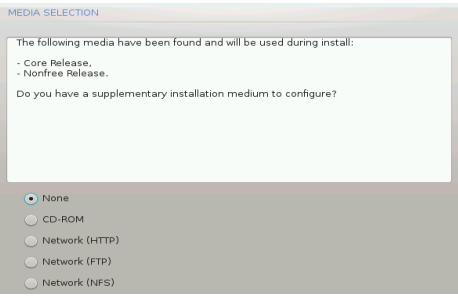

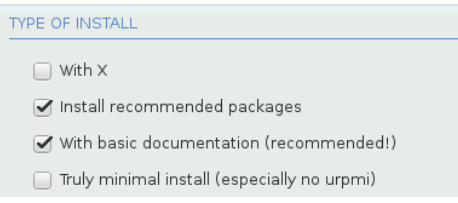

- get the Mageia-5.1 ISO image file for your architecture (ie : « mageia-5.1-x86_64-DVD.iso » for 64b architecture). This ISO image is available on [Mageia website](#) as well as on several [mirror sites of Mageia](#). For example :
 - <http://www.mirrorservice.org/sites/mageia.org/pub/mageia/iso/5.1/>
 - <http://distrib-coffee.ipsl.jussieu.fr/pub/linux/Mageia/iso/5.1/>
- burn this ISO image file on a DVDROM or create a bootable USB flash drive¹. You can also use an external USB disk which simulates a bootable device (ex : zalman zm-ve300 or 400).
- Configure the BIOS settings to unset the “Secure Boot” option, to set the date and time and to enable booting from the CD or USB flash drive. At the end of the installation, configure, once again, the BIOS settings to only boot from the hard drive ;
- insert the CD-ROM or the USB flash drive, reboot the computer and follow the instructions below :

Screen display	Comments	Actions to achieve
	<p>After starting the computer, this screen is displayed.</p> <p>* If the graphical mode doesn't work, you have to configure the BIOS settings to allocate more than 2 MB of shared memory for the graphics card.</p>	<p>Select “Install Mageia 5”.</p>

¹ Two solutions are used to create a bootable USB flash drive :

- in graphical mode you can use “rufus” or “win32 disk image” (Windows) or “isodumper” (Linux)
- in console mode on Linux, plug the USB flash drive and get the name of the device with the “`fdisk -l`” command (an USB flash drive is usually “/dev/sdb” or “/dev/sdc”). Run the command : “`dd if=<name_of_ISO_image> of=<name_of_usb_drive> bs=1M`”.

Screen display	Comments	Actions to achieve
		<p>Select your language.</p>
		<p>Accept the licence agreement.</p> <p>Info: this licence agreement explains that the installed software is free (GPL).</p>
		<p>Choose your keyboard layout.</p>
	<p>The hard disk partitioning will be adapted to the needs of ALCASAR (see next step).</p>	<p>Select “Custom disk partitioning”.</p>
	<p>After removing all the partitions, create the following 5 partitions :</p> <ul style="list-style-type: none"> • / : 5 GB • swap : keep the default size • /tmp : 5 GB • /home : 5 GB • /var : the rest of the hard drive (! size bigger than 10G even on a virtual machine). 	<p>Click on “Clear all”.</p> <p>Then click on the area of the disk (sda) to create each new partition.</p> <p>Info: except the partition of swap, all the filesystem (FS) type are “Journalized FS : ext4”.</p>
	<p>At the end of this operation, and depending on the size of your hard drive, the partitioning should look like this :</p> 	<p>- Create the root partition (/). Choose its size (5 Go) and its filesystem (ext4). Repeat this step for all the partitions.</p> <p>- Once the partitioning completed, click on “Done”.</p>

Screen display	Comments	Actions to achieve
 <p>MEDIA SELECTION</p> <p>The following media have been found and will be used during install:</p> <ul style="list-style-type: none"> - Core Release. - Nonfree Release. <p>Do you have a supplementary installation medium to configure?</p> <p><input checked="" type="radio"/> None</p> <p><input type="radio"/> CD-ROM</p> <p><input type="radio"/> Network (HTTP)</p> <p><input type="radio"/> Network (FTP)</p> <p><input type="radio"/> Network (NFS)</p>	<p>For ALCASAR, it does not need any other media.</p>	<p>Select “None” then click “Next”</p>
 <p>MEDIA SELECTION</p> <p>Here you can enable more media if you want. Some hardware on your machine needs some non free firmwares in order for the free software drivers to work. You should enable "Nonfree Release"</p> <p><input checked="" type="checkbox"/> Core Release</p> <p><input checked="" type="checkbox"/> Nonfree Release</p>		<p>Leave the “Nonfree Release” media enabled then click “Next”</p>
 <p>DESKTOP SELECTION</p> <p>You can choose your workstation desktop profile. Click on images in order to see a bigger preview</p> <p><input type="radio"/> KDE</p> <p><input type="radio"/> GNOME</p> <p><input checked="" type="radio"/> Custom</p> <p>Help Next</p>	<p>ALCASAR doesn't need a graphical environment (it is controlled from a WEB browser)</p>	<p>Select “Custom” then click “Next”</p>
 <p>PACKAGE GROUP SELECTION</p> <ul style="list-style-type: none"> Workstation Server Graphical Environment <p><input type="checkbox"/> Individual package selection</p> <p>Total size: 1521 / 3464 MB</p> <p>Help Unselect All Next</p>	<p>Package group selection : ALCASAR only requires a very minimal install.</p>	<p>Select “Unselect All” then click "Next".</p> <p><u>Info:</u> On Linux, a package is an archive file containing all the components of a software (binary files, help files, configuration files, etc.).</p>
 <p>TYPE OF INSTALL</p> <p><input type="checkbox"/> With x</p> <p><input checked="" type="checkbox"/> Install recommended packages</p> <p><input checked="" type="checkbox"/> With basic documentation (recommended!)</p> <p><input type="checkbox"/> Truly minimal install (especially no urpmi)</p>		<p>Select only “Install recommended packages” and the basic documentation, then click “Next”.</p> <p>The copy of the packages is launched. Estimated time : 2'</p>
 <p>USER MANAGEMENT</p> <ul style="list-style-type: none"> Set administrator (root) password <ul style="list-style-type: none"> Password Password (again) Enter a user <ul style="list-style-type: none"> Icon Real name: sysadmin Login name: sysadmin Password Password (again) 		<p>Assign a password to the "root" account, then, create the "sysadmin" account and assign it a password.</p>

Screen display	Comments	Actions to achieve
	<p>Configuration of your timezone and your country</p>	<p>In the group “System”, click on "Configure" in "timezone" section then in “Country” section. Select your timezone and your country.</p>
		<p>Click on "Configure" in "Network-ethernet" in the "Network & Internet" section.</p>
		<p>Select the type of Internet connection. In the case of use of an ISP broadband modem, choose "Wired (Ethernet)".</p> <p><u>Info</u>: no test has yet been made on other types of Internet access.</p>
	<p>At that time, only the interface connected to the broadband modem of the ISP has to be configured. The second interface, connected to the consultation network, will be configured later, during the installation of ALCASAR.</p>	<p>Select the interface to configure.</p> <p><u>Tips</u>: Choose the interface with the smallest index. Write the name of this interface on a paper.</p> <p><u>Info</u>: the names of interfaces are linked with the physical architecture of your PC. They could differ from the printscreen.</p>
		<p>Select “Manual configuration”</p> <p><u>Info</u>: While it is possible to let this interface in “bootp/dhcp” mode, we recommended configuring it manually in static mode.</p>
	<p>Example :</p> <ul style="list-style-type: none"> • IP address : this address must be in the same subnet as the address of the broadband modem. • Netmask : 255.255.255.0 • Gateway : This is the address of the broadband modem • DNS 1 and DNS 2 :* • Host name : Leave the default value (or blank) 	<p>Enter the parameters of this interface</p> <p>* Enter the IP addresses of the DNS servers provided by your ISP. You can also use other DNS servers. Examples:</p> <ul style="list-style-type: none"> • Free project “OpenNic” (see the web site to know the closest servers for you) • project “OpenDNS” (DNS1=208.67.222.222, DNS2=208.67.220.220) • google (DNS1=8.8.8.8, DNS2=8.8.4.4).
		<p>Select only "Start the connection at boot"</p>
	<p>It is not necessary to start the connection now.</p>	<p>Select "No"</p>

Screen display	Comments	Actions to achieve
		Click on "Finish"
		Click on "Next"
	Security updates will be managed during the installation of ALCASAR.	Select "No" and click on "Next"
	The installation is finished.	Click on "Reboot" Remove the CDROM or the USB flash drive. Reconfigure the BIOS to boot only from the hard drive.

2.3. Installation of ALCASAR

Configuration of the network cards

Screen display	Comments	Actions to achieve
	Disconnect the cables of the two network cards. Log in as root	
	Run the blinking of the LED of the network card configured previously. Stop the blinking	<code>ethtool -p enp0s3</code> <i>On this blinking interface, connects the cable linked to the ISP broadband modem (Internet access).</i> <code><Ctrl> + c</code> <i>Info: replace "enp0s3" with the name of the network card you've configured previously (see Page 5). The commands « ifconfig » or « ip link » display the name of all the network card connected in your PC.</i>
	Verify that the link is up on this interface.	<code>watch ethtool enp0s3</code> <i>Info: the last line display the link state (Link detected <yes/no>)</i> Wait until the link is up. Otherwise, plug the cable into the other network card. When the link is detected, stop the command with the <code><Ctrl> + c</code> keys
	Do the same operation with the second card (eth1) and the cable connected to the consultation network.	<code>watch ethtool xxxxxx</code> <i>Info: On the consultation side, connect a network equipment (Ethernet or PLC switch, WIFI AP, etc.) to ensure a permanent network link even if all consultation stations are off.</i>

Screen display	Comments	Actions to achieve
<pre>[root@localhost ~]# ping -c3 www.google.fr PING www.google.fr (216.58.211.99) 56(84) bytes of data: 64 bytes from par03s15-in-f99.1e100.net (216.58.211.99): icmp_seq=1: ttl=64 time=0.458 ms 64 bytes from par03s15-in-f99.1e100.net (216.58.211.99): icmp_seq=2: ttl=64 time=0.458 ms 64 bytes from par03s15-in-f99.1e100.net (216.58.211.99): icmp_seq=3: ttl=64 time=0.458 ms --- www.google.fr ping statistics --- 3 packets transmitted, 3 received, 0% packet loss, time 2003ms rtt min/avg/max/mdev = 28.971/29.768/30.546/0.658 ms</pre>	Test your Internet connectivity	<code>ping -c3 www.google.com</code>

Download the installation file

This file is an archive file named : `alcasar-x.y.tar.gz` ('x.y' means the version number you want). You can download it in two different ways (USB flash drive or FTP) :

- via an USB flash drive : Download the latest version on the ALCASAR website and copy it on an USB flash drive. Then, use the following procedure to copy it on ALCASAR computer :

Screen display	Comments	Actions to achieve
<pre>[root@localhost ~]# fdisk -l Disque /dev/sda: 80.0 Go, 80032038912 octets 255 heads, 63 sectors/track, 9730 cylinders Units = cylinders of 16065 * 512 = 8225280 bytes Disk identifier: 0x75ad03f6 Périphérique Amorce Début Fin Blocs Id Système /dev/sda1 1 1275 10241406 7 HPFS/NTFS /dev/sda2 1276 6630 43014037+ 7 W95 Etendu (LBA) /dev/sda5 1276 2550 10241406 7 HPFS/NTFS /dev/sda6 2551 3832 10297633+ 83 Linux /dev/sda7 3833 4081 2000061 82 Linux swap / Solaris /dev/sda8 4082 6630 20474011 83 Linux Disque /dev/sdb: 1024 Mo, 1031789784 octets 16 heads, 32 sectors/track, 3996 cylinders Units = cylinders of 512 * 512 = 262144 bytes Disk identifier: 0xc01d7d24 Périphérique Amorce Début Fin Blocs Id Système /dev/sdb1 1 3936 1007600 e W95 FAT16 (LBA)</pre>	<p>Insert the USB flash drive.</p> <p>Display information on mass media storage to get the name of your USB flash drive. In this example, "/dev/sdb1" is a 1 GB USB flash drive.</p>	<p><code>fdisk -l</code></p> <p>Info : You also can display the system log to get this name (<code>journalctl -f</code>).</p>
<pre>[root@localhost ~]# mkdir /media/usb [root@localhost ~]# mount /dev/sdb1 /media/usb/ [root@localhost ~]# cp /media/usb/alcasar-* . [root@localhost ~]# umount /media/usb/</pre>	<ul style="list-style-type: none"> • Create a directory and mount the USB flash drive on it. • Copy the archive of ALCASAR to the directory "/root". • Unmount the USB flash drive. • Unplug it. 	<p><code>mkdir -p /media/usb</code> <code>mount /dev/sdb1 /media/usb/</code> <code>cp /media/usb/alcasar-* /root/</code> <code>umount /media/usb</code></p> <p>Info : Replace "sdb1" with the device name retrieved in the previous step.</p>

- via FTP : directly from the ALCASAR computer, download the archive file from the FTP server :

Screen display	Comments	Actions to achieve
<pre>[root@localhost ~]# lftp ftp.alcasar.net/pub cd ok, cwd=pub lftp ftp.alcasar.net:pub> cd stable cd ok, cwd=pub/stable lftp ftp.alcasar.net:pub/stable> ls -rw-r--r-- 1 root root 87551826 Oct 16 05:35 alcasar-2.8.1.tar.gz -rw-r--r-- 1 root root 87547182 Jan 27 2014 alcasar-2.8.tar.gz lftp ftp.alcasar.net:pub/stable> get alcasar-2.8.tar.gz 37547182 octets transférés en 90 secondes (950.4Ko/s) lftp ftp.alcasar.net:pub/stable> bye [root@localhost ~]#</pre>	<ul style="list-style-type: none"> • Connect to the FTP server with the "lftp" command • change to the directory "stable" and list its content • download the archive file • quit 	<p><code>lftp ftp.alcasar.net/pub</code> <code>cd stable</code> <code>ls</code> <code>get alcasar-x.y.tar.gz</code> <code>bye</code></p>

Installation

Screen display	Comments	Actions to achieve
<pre>root@localhost ~]# sha256sum alcasar-2.7-test.tar.gz aa6a06936664eb209b0aa7e2160fd0350094c6785de3ae27d1801d29492477ba</pre> 	<ul style="list-style-type: none"> • Compute the SHA256 digital footprint of this archive and compare it with that of the website. 	<p>sha256sum alcasar-x.y.tar.gz</p> <p>Info : If the digital footprint doesn't match, download the archive again. If the problem occurs one more time, ask the developer team via the forum.</p>
<pre>root@localhost ~]# tar -xvf alcasar-3.0.tar.gz root@localhost ~]# cd alcasar-1.3.0/ root@localhost alcasar-1.3.0]# _ root@localhost alcasar-1.3.0]# sh alcasar.sh -i</pre>	<ul style="list-style-type: none"> • Uncompress and extract this archive. • Move to the directory of ALCASAR and run the installation script. 	<p>tar -xvf alcasar-x.y.tar.gz cd alcasar-x.y sh alcasar.sh -i</p>
	<p>Acceptation of the licence</p>	<p>ALCASAR is a free software (open source) developed under the GPLv3 licence.</p>
	<p>The network configuration is tested.</p>	
	<p>The installation of about a hundred software (packages) is done from Internet. Estimated time : 3'</p>	
	<p>Enter the name of your organisation (without spaces)</p>	<p>Example : rashacla Info : <u>This name is mandatory</u>. The only characters allowed are : [a-z] [A-Z] [0-9] [-]</p>
	<p>Define the IP address of ALCASAR and the network addressing plan of the consultation network. You can accept the default one or change it.</p>	<p>Enter « Y » or « N »</p> <p>Info : If you type "N", the script will ask you for the IP address of ALCASAR and the subnet mask in CIDR notation (ex: 172.16.0.1/16)</p>
	<p>Enter the username and password for a first ALCASAR administrative account.</p>	<p>Info : This account is used to administer ALCASAR from the consultation network via the graphical control centers at the url "http://alcasar.localdomain". This is not a consultation user account.</p>
	<p>The installation is complete. The system can be rebooted.</p>	<p>Hit "Enter"</p>
<pre>alcasar-rpxy-vm:~]# alcasar-daemon.sh 20 services needed by ALCASAR are started. All is ok alcasar-rpxy-vm:~]# _</pre>	<p>Once the system is restarted, login on the system as "root". You can check that all needed services are really started with the command "alcasar-daemon.sh".</p> <p>Logout</p>	<p>If one or more services are not started, the script will attempt to start them.</p> <p>Hit "exit" or "<CRTL> + d"</p>

2.4. Connexion to the ALCASAR Control Center

On the consultation network, switch on a equipment and connect a WEB browser to the URL “<http://alcasar.localdomain>” in order to display the following page :

Click on the small cranted wheel at the bottom right in order to connect to the ALCASAR Control Center (ACC). You must authenticate you with the first account created during the installation process (§2.3 – P9 of this document).

Now, read the exploitation documentation (“alcasar-exploitation-en.pdf”) to create your first “user” accounts.

3. Stop, uninstall, reinstall or update ALCASAR

You can stop the ALCASAR computer with the power button, or with the command « `poweroff` » or via the WEB ALCASAR Control Center (ACC).

You can uninstall the portal with the command « `sh alcasar.sh --uninstall` ». This command uninstalls only ALCASAR. The operating system (Linux Mageia) is still present.

If you launch the installation again or if you launch the installation of a newer version on a running version of ALCASAR, the script will ask you if you want to perform an update.

4. Preparation of an off-line installation

This procedure allows you to install ALCASAR in offline mode. This can be useful when you manage to install ALCASAR in a place with a lack of Internet bandwidth. In this case, it's interesting to create an archive file of all the packages (RPMs) needed. This file will be used instead of the Internet downloading. Use the following procedure :

- Creation of the RPM archive file : on a new PC, install “Mageia Linux” as describe in §2.2. Then, retrieve and uncompress the last ALCASAR archive. Go to the scripts directory « `cd alcasar-x.y/scripts/sbin` » and run the script « `./alcasar-rpm-download.sh` ». This script will create the RPM archive file of your PC architecture (32 or 64 bits). Retrieve this archive file on a USB key.
- Offline installation : after installing the system, retrieve the RPM archive file. Uncompress it and go in its directory. Install all the RPM (`urpmi --no-verify-rpm *`). Then, follow the installation process describes in chapter §2.3.

5. ALCASAR settings sheet

The file « `/root/ALCASAR-passwords.txt` » contains passwords used internally by the different modules of ALCASAR. It contains, more particularly, the password protecting the bootloader (« GRUB »). It can be consulted via the command « `cat /root/ALCASAR-passwords.txt` ». Be careful : when you enter the GRUB password, you keyboard is map like a “qwerty” keyboard.

Organization name :	
Users authentication page	This page is displayed when a browser tries to access a HTTP website.
The welcome page of ALCASAR allows: <ul style="list-style-type: none"> • to access the ALCASAR Control Center. • log the users out • change the users password • install the certificate of the Certification Authority (C.A.) in the browsers. 	http://alcasar.localdomain Info : The possibilities of the ALCASAR Control Center (ACC) are described in the "ALCASAR-exploitation-en.pdf" document.
Linux accounts	root password : sysadmin password :
First ALCASAR WEB administrative account	Login: password :
Network parameters <ul style="list-style-type: none"> • IP address of the ISP's equipment (router) : • IP address of DNS servers : • IP address of ALCASAR (WAN/Internet side) : • IP address of ALCASAR (LAN side) : 	<ul style="list-style-type: none"> • _____ • DNS1 : _____ • DNS2 : _____ • _____/_____ • _____/_____
